Firewood Processor

SA27 Pro Firewood Processor

With the Brugger SA27 Pro automatic firewood processor, logs up to 48cm in diameter, can be quickly and easily processed into firewood.

We offer three different drive options:

- 14hp Kohler gasoline engine
- 9.5kW 400V electric motor
- PTO drive

Ash, beech, oak?

Thanks to 20 tons of rated power, even the strongest hardwood logs give way!

The automatic firewood processor is characterized by its simple but well-thought-out design.

It does not require an electronic control system and is operated purely by mechanical components.

This makes it highly low-maintenance and repairs can be carried out quickly and easily.

Hydraulic Operating

- ✓ Hydraulic lowering of the chain saw
- ✓ Slide-in conveyor belt to the chain saw
- ✓ Simple operation by lever

Thanks to the improved Pro version, the chain saw and log clamp is lowered hydraulically. The conveyor belts have been widened, reinforced, and much more.

Since 2023, the color of the machine and the entire Brugger product range is dark red with black

The length of the logs can be adjusted continuously from 15 up to 55 cm.

The splitting knife can be adjusted in height by means of a hand lever. Thus, you can split 2-fold, 4-fold or 6-fold depending on the thickness of the wood. If a log is too large, it is simply thrown back and split again.

The work can be additionally facilitated by the optionally available log lifter or chain conveyor. Several logs can be loaded onto the chain conveyor with the help of a forklift, crane, or front loader, so that it is not always necessary to lift just one log.

If a log lifter or chain conveyor is used, logs longer than 5m can be processed. In the basic version of the machine, the length is 2m.

Despite the high splitting force and large diameter, the machine remains compact and can be easily transported.

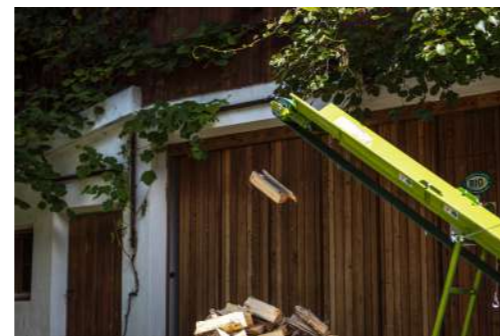

The automatic saw log splitter is sold without road approval.

The version with PTO drive has no wheels but is mounted directly to the three-point.

Technische Daten

Manufacturer:	Brugger	Max. Diameter:	48 cm
Model:	SA27Pro	Forward + reverse speed:	8 Sek.
Motor:	Kohler	Chain bar:	22 inch, 56 cm
Power:	14 HP	Log length:	15-55 cm
Cubic capacity:	420 ccm	Chainsaw speed:	8000 rpm
Engine Speed:	4800 Rpm.	Infeed conveyor 1,8 m:	Hydraulic
Fuel:	Gasoline	Outfeed Conveyor, 3,5 m:	Hydraulic
Splitting Knife:	4 / 6 / Way	Weight ca.	830 kg
Splitting Force:	20 Ton

Chain infeed Log Deck	€ 1.898,-

All prices plus VAT.

Bruggger SA27 Pro

BS31 Pro Sawmill

Simple and compact log band sawmill, with which logs up to a diameter of 79cm can be processed. Does not require much technology and is therefore easy to operate and requires little maintenance. Advantages of the BS31

Pro:

- electric height adjustment
- electric start
- adjustable blade guide

SA27 - Pro Version
